

REConnect by Neutrino

Value Proposition for HGAR Marketing

REConnect is a platform that connects your listings to tools to market and share your listings. REConnect includes a Canva-based app that lets real estate professionals pull live MLS listing photos and details as well as market statistics directly into their Canva designs. REConnect also has single property websites and Market Statistics. The following points represent what REConnect does currently, how it is different from competing tools, and what HGAR members receive at no cost.

01 Works With Any Canva Account — Including Free

REConnect is available inside Canva's App Store and works on every Canva account tier — Free, Pro, Teams, and Enterprise. Members do not need to purchase or upgrade their Canva account to use REConnect. This is a meaningful distinction.

02 Real-Time MLS Listing Data Inside Canva

Once a member logs into REConnect inside Canva, their MLS listings appear automatically — no copy-pasting, no manual data entry. Everything updates in real time from the MLS, including:

- Listing photos
- Property details (address, price, beds, baths, square footage, and more)
- Listing agent and office information
- Add if purchased, Market Statistics by state, city, and zip code

03 Drag-and-Drop — Not Just Autofill

Members drag listing photos and data fields directly onto any Canva design — whether a pre-built template or a blank canvas. This gives agents and marketing teams full creative flexibility but with no hassle. REConnect lets members place the data wherever they want it and if the member has Canva Enterprise we can set them up with auto-fill.

04 Market Statistics — A Built-In Differentiator

REConnect has Market Statistics organized by state, city, and zip code which is available directly inside the app in Canva alongside listing data. Agents can build market reports, community spotlights, and buyer/seller guides without leaving their design tool.

05 What Every HGAR Member Gets — Included Free

Feature	What It Does
MLS Listing Data	Live listing photos, property details, agent and office info pulled directly from the MLS in real time.
Templates	Built-in free templates plus the ability to add your own brokerage's templates to be right in the App
Drag and Drop	Place any listing data field or photo exactly where you want it on any Canva design, any tier.

Feature	What It Does
Any Canva Tier	Works on Free, Pro, Teams, and Enterprise Canva accounts. No Canva upgrade required.
One Free SLW	Each member gets one free single listings websites for their most expensive active listing at the time of launching the app to the members

06 Optional Upgrades — Members Choose What They Need

The free Agent seat covers the core REConnect experience. Members can unlock additional features at any time:

- Market Statistics — organized by state, city, and zip code which is available directly inside the app in Canva alongside listing data.
- Admin Seat — access to full brokerage or office listing inventory, not just personal listings
- Single Listing Websites — auto-generated property websites with QR code, brochure, and optional vanity domain
- Vanity Domains — purchase a vanity domain for your single listing website
- Additional MLS connections — activate data from additional MLSs within one account

07 What REConnect Is — and Is Not

To help HGAR avoid misrepresentation in marketing materials:

- REConnect is a Canva app — it lives inside Canva and requires a Canva account (free accounts work)
- REConnect is not a standalone design tool — it works within Canva's existing interface
- REConnect is not a social media scheduler — members use Canva's built-in scheduler for posting
- REConnect does not replace an agent's MLS portal — it pulls data from it into Canva for marketing use
- Market Statistics availability depends on MLS connection — confirm with REConnect team for specific MLSs and yes it is available for OneKey
